

***"COMPRESSED AIR SYSTEM SPECIALISTS"***

---

## **AIR COMPRESSOR SERVICE TECHNICIAN**

Based in Windsor, Ontario, **Trident Compressed Air Ltd.** has established itself as a leading supplier and service provider of industrial compressed air equipment throughout South Western Ontario. For more than 30 years, our success has been the direct result of our people, helping our customers, achieve their goals.

We are seeking a reliable, customer service focused individual, with excellent electrical/mechanical skills to provide industry leading service to our customers. The Service Technician will be a responsible, motivated, and self-reliant individual who also works well as part of a team, maintaining positive relationships with customers, vendors and co-workers.

Additionally, you would be expected to engage in retrofit and repair of compressed air systems, utilizing knowledge of air compression theory, pipe fitting, and mechanical layouts. This will include diagnosing, and repair of compressed air and drying systems, utilizing knowledge of electronics, direct digital control, airflow, mechanical compression, refrigeration theory, control and mechanical techniques in various industrial settings. The successful Candidate will report to the Service Manager, and work closely with our existing Service Coordinator.

This position will include:

- Diagnosing, and repair of compressed air and drying systems, utilizing knowledge of electronics, direct digital control, airflow, mechanical compression, refrigeration theory, and control and mechanical techniques in various industrial settings
- Utilize specialized hand tools, software and technology, following schematics and engineered drawings or engineering specifications, to diagnose and repair units.
- Engage in retrofit, repair and installation of compressed air systems, utilizing knowledge of air compression theory, pipe fitting, and mechanical layouts.

Includes (con't):

- Performing preventative maintenance on various makes and models of compressed air equipment as required per customer agreements.
- Keeps current on products concerning operation, maintenance, service, installation, and repair of compressed air systems and PLC Controls.
- Interact with, and communicate with customers in person and on the phone.
- Reviewing technical manuals, websites, and data bases to assist with the diagnosis and repair of equipment.
- Operating a service vehicle for on-site customer repairs. Must possess a valid driver license and a clean driving record.
- Working as part of a team with other technicians, service manager, service coordinator, parts coordinator(s), and sales personnel.
- Combination of in-shop work and work at customer locations, including some out of town work from time to time.
- Minimum 40 hour work week with occasional overtime, plus rotating after-hours on-call and possible weekends as the business requires. Occasional overnight travel may occur depending on customer location and requirements.
- Some administrative tasks including completion of work orders, reports, safety forms, etc

Previous air compressor repair experience, licensed millwright, electrical troubleshooting, and refrigeration repair experience are assets for this position; however, we will provide training for applicants with a strong electrical/mechanical background and a willingness to learn.
